CABO DE SÃO VICENTE

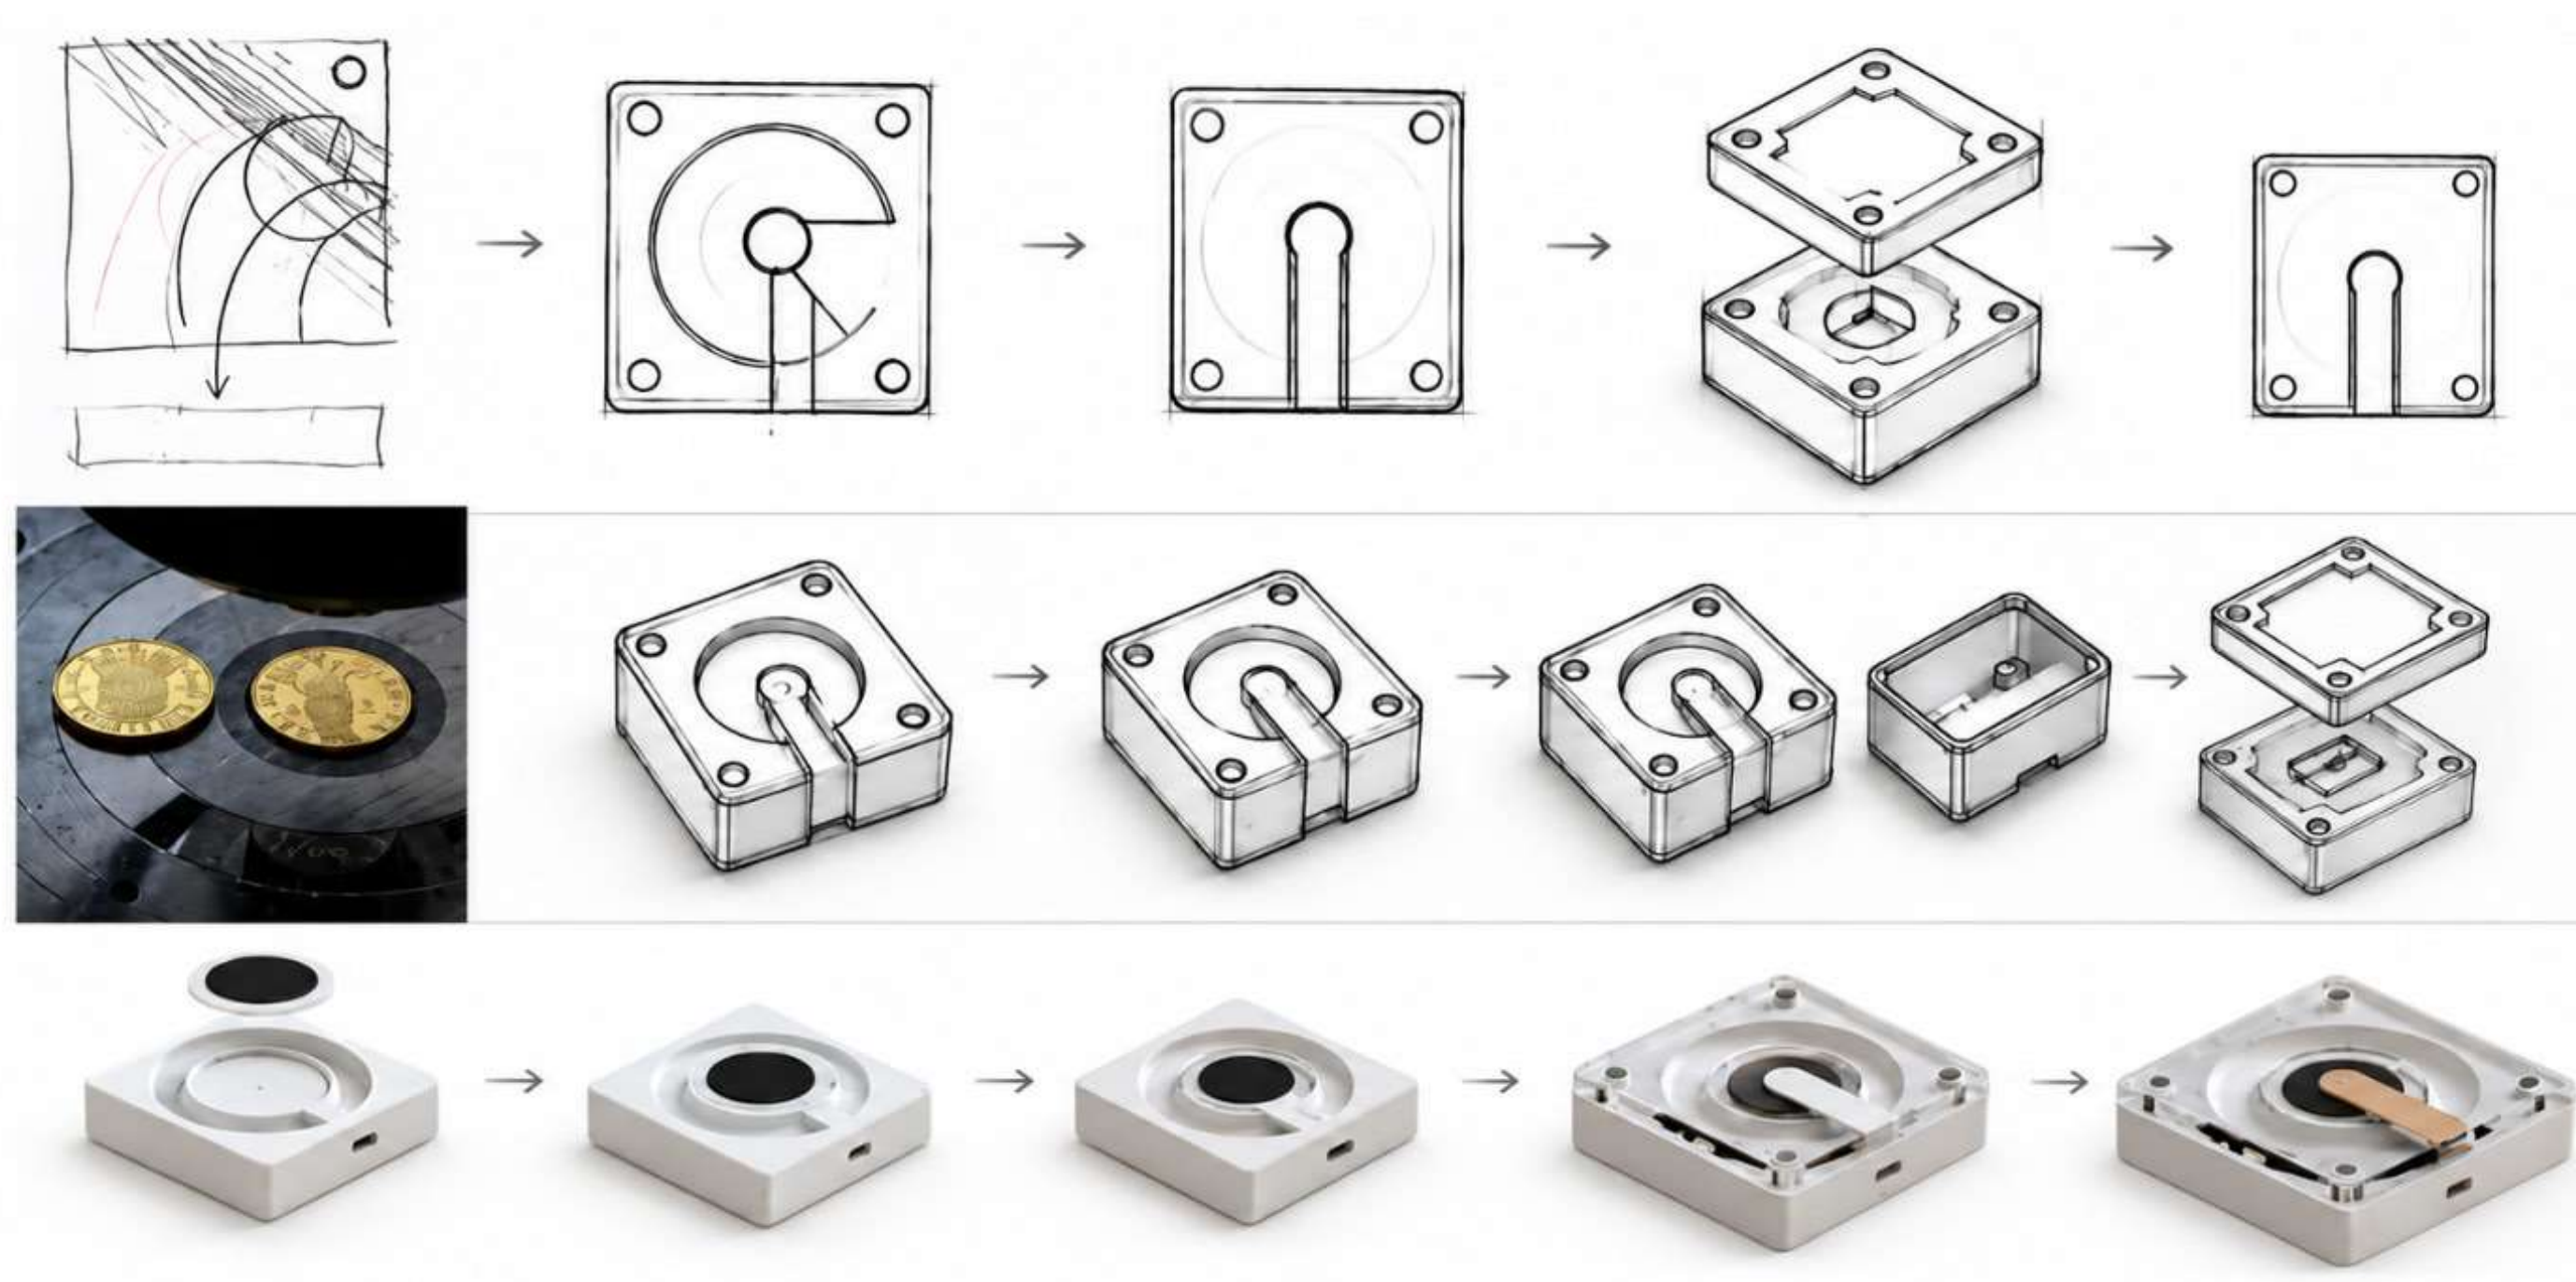

LIGHTHOUSES OF PORTUGAL

Initiating the “Portuguese Lighthouses” series, this coin designed by José João de Brito pays tribute to the Cabo de São Vicente Lighthouse.

Operational since 1846, the design highlights its historic importance and the role it plays in maritime safety and navigation.

Inspired by the minting process, the design centres on a circular geometry that highlights the coin as the focal element.

A transparent cover enhances its visibility, creating a clean and contemporary aesthetic.

Inspired by the minting process, the design centres on a circular geometry that highlights the coin as the focal element. A transparent cover enhances its visibility, creating a clean and contemporary aesthetic.

The enclosure integrates two custom PCBs, a USB-C charging system, and pogo-pin contacts for automatic coin charging. Concealed magnets provide a seamless closing mechanism, while lifting the transparent lid activates the coin’s illumination for approximately 50 seconds. By combining materials, electronics, and interaction, the enclosure transforms traditional coin packaging into an engaging collectible display.

5 € • Ø 30 mm

Copper níkel CuNi 75/25 • 14 g

30 000 coins

Silver proof Ag 925 ‰ • 8.5 g

4000 coins

Gold proof Au 999 ‰ • 15.55 g

1500 coins

Proof packaging Case with numbered certificate of guarantee

Released April 2026
